Winter Wheat

Winter Wheat

We are widely well reckoned as one of the most prominent organic wheat seeds Exporters in India. We procure our hybrid wheat seeds from the highly reputed manufacturers of wheat seeds. Our wheat seeds are the first generation seeds, which are in high demand due to their taste and long lasting shelf life.

Wheat is one of the most important staple food grains of human race. It is used mainly as flour for making a variety of breads, baking products such as: cakes, noodles, crackers, breakfast foods, biscuits, cookies and confectionery items. Over 90 per cent of the wheat produced in the country is ground in chakkis to obtain flour. The remaining 10 per cent pass through roller flour mills to yield maida and white flour used mainly for making a variety of bakery products. Most of the domestic consumption is found in the form of homemade chapattis or rotis using custom milled atta.

Fertilizer..

Fertilizers are compounds given to plants to promote growth; they are usually applied either via the soil, for uptake by plant roots, or by foliar feeding, for uptake through leaves. Fertilizers can be organic (composed of organic matter, i.e. carbon based), or inorganic (containing simple, inorganic chemicals). They can be naturally-occurring compounds such as peat or mineral deposits, or manufactured through natural processes or chemical processes

In general, agricultural fertilizers contain only one or two macronutrients. Agricultural fertilizers are intended to be applied infrequently and normally prior to or along side seeding.

The Benefits of Winter Wheat

The benefits of winter wheat include:

- * A higher yield potential than spring wheat
- * Greater profitability as it often requires less inputs than spring wheat
- * More efficient use of labor and machinery as it is planted and harvested during periods with few competing field activities
- * Establishment of a cover to reduce wind and water erosion
- * Establishment of a cover for wildlife in fall and early spring

Winter wheat is very well suited for no-till cropping systems in which standing residue traps snow and reduces winter kill by insulating the crop from lethal temperatures. Incentive payments like the Environmental Quality Incentive Program (EQIP) to adopt direct seeding practices and/or establishment of winter wheat as a cover crop may be available to provide the afore mentioned benefits for your operation. Check with your local offices about applicable incentive programs.
